## Solutions for Homework 2

1. Given a commutative ring $R$ and an element $a \in R$, we say that

- $a$ is invertible (or, a unit) if there is an element $b \in R$ such that $a b=1$.
- $a$ is a zero-divisor if there is an element $b \in R$ such that $a b=0$.
- $a$ is an idempotent if $a^{2}=a$.

For the ring $R=\mathbb{Z}_{18}$ :
(i) List all the invertible elements, zero-divisors, and idempotents.

- Invertible elements: $1,5,7,11,13,17$.
- Zero-divisors: $0,2,3,4,6,8,9,10,12,14,15,16$.
- Idempotents: 0, 1, 9, 10.
(ii) Are there any elements which are neither zero-divisors nor invertible?

No
(iii) Are there any zero-divisors which are not idempotent?

Yes: $2,3,4,6,8,12,14,15,16$.
2. Let $\mathbb{Z}_{n}$ be the (additive) group of integers modulo $n$, and let $\mathbb{Z}_{n}^{\times}$be the (multiplicative) group of invertible elements in $\mathbb{Z}_{n}$.
(i) Write down the addition and multiplication tables for $\mathbb{Z}_{6}$.

| + | 0 | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 1 | 2 | 3 | 4 | 5 |
| 1 | 1 | 2 | 3 | 4 | 5 | 0 |
| 2 | 2 | 3 | 4 | 5 | 0 | 1 |
| 3 | 3 | 4 | 5 | 0 | 1 | 2 |
| 4 | 4 | 5 | 0 | 1 | 2 | 3 |
| 5 | 5 | 0 | 1 | 2 | 3 | 4 |

| $\cdot$ | 0 | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 1 | 0 | 1 | 2 | 3 | 4 | 5 |
| 2 | 0 | 2 | 4 | 0 | 2 | 4 |
| 3 | 0 | 3 | 0 | 3 | 0 | 3 |
| 4 | 0 | 4 | 2 | 0 | 4 | 2 |
| 5 | 0 | 5 | 4 | 3 | 2 | 1 |

(ii) Write down the multiplication table for $\mathbb{Z}_{8}^{\times}$.

| $\cdot$ | 1 | 3 | 5 | 7 |
| :---: | :---: | :---: | :---: | :---: |
| 1 | 1 | 3 | 5 | 7 |
| 3 | 3 | 1 | 7 | 5 |
| 5 | 5 | 7 | 1 | 3 |
| 7 | 7 | 5 | 3 | 1 |

3. For each of the following groups, list all their elements, together with their orders.
(i) $\mathbb{Z}_{18}$.

| $g$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\operatorname{ord}(g)$ | 1 | 18 | 9 | 6 | 9 | 18 | 3 | 18 | 9 | 2 | 9 | 18 | 3 | 18 | 9 | 6 | 9 | 18 |

(ii) $\mathbb{Z}_{18}^{\times}$.

$$
\begin{array}{c|c|c|c|c|c|c}
g & 1 & 5 & 7 & 11 & 13 & 17 \\
\hline \operatorname{ord}(g) & 1 & 6 & 3 & 6 & 3 & 2
\end{array}
$$

(iii) $\mathbb{Z}_{4} \times \mathbb{Z}_{2}$.

| $g$ | $(0,0)$ | $(1,0)$ | $(2,0)$ | $(3,0)$ | $(0,1)$ | $(1,1)$ | $(2,1)$ | $(3,1)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\operatorname{ord}(g)$ | 1 | 4 | 2 | 4 | 2 | 4 | 2 | 4 |

(iv) $\mathbb{Z}_{8}^{\times} \times \mathbb{Z}_{3}$.

| $g$ | $(1,0)$ | $(3,0)$ | $(5,0)$ | $(7,0)$ | $(1,1)$ | $(3,1)$ | $(5,1)$ | $(7,1)$ | $(1,2)$ | $(3,2)$ | $(5,2)$ | $(7,2)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\operatorname{ord}(g)$ | 1 | 2 | 2 | 2 | 3 | 6 | 6 | 6 | 3 | 6 | 6 | 6 |

4. For each of the following groups, find all the cyclic subgroups of the group.
(i) $\mathbb{Z}_{8}=\{0,1,2,3,4,5,6,7,8\}$. This is a cyclic group of order 8 . All subgroups are cyclic, and there are 4 of them: $\{0\},\{0,4\},\{0,2,4,6\}$, and $\mathbb{Z}_{8}$.
(ii) $\mathbb{Z}_{9}^{\times}=\{1,2,4,5,7,8\}$. This is a cyclic group of order 6 , generated by 2 (or by 5 ). All subgroups are cyclic, and there are 4 of them: $\{1\},\{1,8\},\{1,4,7\}$, and $\mathbb{Z}_{9}^{\times}$.
(iii) The symmetric group $S_{3}$. This is a (non-abelian) group of order 6 ; in cycle notation, its elements are: $S_{3}=\{(),(12),(13),(23),(123),(132)\}$. All its proper subgroups are cyclic, and there are 5 of them: $\{()\},\{(),(12)\},\{(),(13)\},\{(),(23)\}$, and $\{(),(123),(132)\}$.
5. Let $G=\mathrm{GL}_{2}(\mathbb{R})$ be the (multiplicative) group of invertible $2 \times 2$ matrices with entries in $\mathbb{R}$. For each of the following sets of $2 \times 2$ matrices with real entries determine whether the set is a subgroup of $G$.
(i) $A=\left\{\left.\left(\begin{array}{ll}a & b \\ 0 & 0\end{array}\right) \right\rvert\, a b \neq 0\right\}$.

No, since this the matrices in $A$ are not invertible, so $A$ is not even a subset of $G$.
(ii) $B=\left\{\left.\left(\begin{array}{ll}0 & b \\ c & 0\end{array}\right) \right\rvert\, b c \neq 0\right\}$.
$B$ is a subset of $G$, but it is not a subgroup of $G$, since $\left(\begin{array}{ll}1 & 0 \\ 0 & 1\end{array}\right) \notin B$, or, alternatively,

$$
\left(\begin{array}{ll}
0 & b \\
c & 0
\end{array}\right) \cdot\left(\begin{array}{ll}
0 & \bar{b} \\
\bar{c} & 0
\end{array}\right)=\left(\begin{array}{cc}
b \bar{b} & 0 \\
0 & c \bar{c}
\end{array}\right) \notin B .
$$

(iii) $C=\left\{\left.\left(\begin{array}{ll}a & 0 \\ 0 & 1\end{array}\right) \right\rvert\, a \neq 0\right\}$.

Yes, since $\left(\begin{array}{ll}a & 0 \\ 0 & 1\end{array}\right) \cdot\left(\begin{array}{cc}\bar{a} & 0 \\ 0 & 1\end{array}\right)^{-1}=\left(\begin{array}{ll}a & 0 \\ 0 & 1\end{array}\right) \cdot\left(\begin{array}{cc}\bar{a}^{-1} & 0 \\ 0 & 1\end{array}\right)=\left(\begin{array}{cc}a \bar{a}^{-1} & 0 \\ 0 & 1\end{array}\right) \in C$.
